MATTHEW PHILLIPS

ENGINEERING TECHNICIAN | CAD / MECHANICAL DRAFTING

Chicago, IL | Matthew.phillipspro@gmail.com | linkedin.com/in/mp114

PROFESSIONAL SUMMARY

B.S. in Industrial Management and Technology with SolidWorks technical-drawing coursework, engineering research and manufacturing quality exposure. Authored dimensioned mechanical component sheets and supported construction scope and drawing revisions for family-business projects. Seeking entry-level CAD technician, drafting, or engineering technician roles; NIU safety training includes TECH 231 coursework.

TECHNICAL SKILLS

CAD SolidWorks (coursework and original 2013–2014 samples); AutoCAD (basic/coursework); Creo (basic)

Drawings Orthographic/isometric views; dimensions; title blocks; notes; sheet revisions; drawing interpretation

Technical methods GD&T coursework; manufacturing processes; component checks; technical reporting

Research Infrared thermography; ultrasound; vibration/impact data; introductory FEA/SolidWorks Simulation

SELECTED ORIGINAL CAD WORK — DRAWINGS ATTACHED

Control Block – SolidWorks Drawing (TECH 312 coursework)

2013 original drawing; January 2014 revised sheet

- Created a dimensioned, multiview control-block sheet showing front, side and isometric views, notes, material/title information and a drafter credit.
- Documented curved geometry, section features and positional relationships using annotated drawing views for technical communication.

Machined Component – SolidWorks Drawing (TECH 314 coursework)

January 21, 2014

- Drafted a small mechanical part with orthographic and isometric views and explicit dimensional annotations; title block credits Matthew Phillips.
- Packaged the original drawing as a recruiter-viewable CAD sample with dimensions and notes preserved.

RELATED EXPERIENCE

Construction CAD and Project Documentation Support | Batiste Interior Professionals

Family business, South Holland, IL | Project-based evidence 2021–2026

- Reviewed and transmitted shared 2021 garage/shed elevations with dimensional corrections for project documentation; drawing authorship was collaborative.
- Prepared construction scopes and bid materials for a 2023 shower-door proposal and a 2023 deck-and-gate proposal, with labor/material details.
- Updated a $28,746 kitchen-renovation proposal in 2026, detailing cabinetry, flooring, drywall, electrical, plumbing and finish work.
- Corrected document dates and signatures with a customer by email, resulting in amended bid paperwork ready for client review.

Production / Quality Support | Greif Manufacturing | Staffmark

2014–2015

- Assisted industrial packaging production involving steel drums and related components, applying written work and quality procedures.
- Observed output condition and reported process or product concerns to site staff while working under plant safety rules.

Paid Petition Circulator / Field Campaign Specialist | Direct Democracy Unlimited

Political campaign assignments

- Collected approximately 100 petition signatures per day during political campaign assignments and became a top-performing petition circulator.
- Conducted face-to-face outreach, explained petition purposes and requirements, answered questions, and kept organized signature records while working independently to campaign deadlines.

ENGINEERING RESEARCH

Undergraduate Research Team Member | Northern Illinois University

2012–2013 | Three-student academic team

- Investigated potential internal defects in aluminum beams using active infrared thermography, ultrasound and vibration-frequency analysis.
- Assisted with SolidWorks models and experimental descriptions, documenting assumptions and results in an academic report.
- Compared test approaches and recorded methodological limits; did not claim a validated production inspection method.

AI-ASSISTED DEVELOPMENT & TECHNICAL WORKFLOWS

- Use AI coding assistants to prototype applications, structure requirements, troubleshoot code and automate documentation tasks.
- Familiar with AI-assisted web/mobile development, UI design, APIs, prompt engineering and iterative testing; CAD drawing samples remain attached separately.

EDUCATION

Bachelor of Science, Industrial Management and Technology | Northern Illinois University | December 2014

RELEVANT COURSEWORK AND TRAINING

NIU CAD (TECH 211); Computer Modeling (TECH 262); Design, Dimensioning and Tolerance (TECH 344); Safety Training (NIU TECH 231). Course names reflect archived NIU checklist and prior academic records. Historical OSHA Outreach training (2012–2013), not an active professional certification.

CAD PORTFOLIO

Attached: 3 original credited CAD drawing sheets with preserved dimensions, part views, notes and title blocks.
